

**HOME GRADING BENEFITS**

Kumon of Houston Heights requires home grading of worksheets by parents. Home grading provides a number of benefits for students and parents:

1. Parents, by checking work, can help their children establish a Kumon study routine by ensuring that work is completed daily.
2. Students can correct mistakes immediately, thereby preventing the same error from being repeated over consecutive days.
3. Students are able to complete corrections faster because the information is fresh in their mind.
4. Parents have an opportunity to learn more about Kumon and their children's progress by being closely involved.
5. Students are encouraged to work harder because they know their work will be checked immediately.
6. Parents have increased opportunities to encourage and praise their children.
7. Students will develop a more positive attitude about attending the Center since they will be able to immediately sit down and work on that day's worksheets instead of having to make their corrections from the previous class's homework which may involve several days' worth of corrections.
8. Students whose parent's home grade progress faster than students whose parents don't.

Home grading is an integral part of the efficient operation of this Kumon Center and important in maximizing your child's progress in the program. This page will provide you, the parent, with detailed instructions on how to home grade. Please read it thoroughly and consult it often if you have any questions on your child's work. As always, do not hesitate to ask me for guidance in this area.

**GRADING PRINCIPLES**

1. Use a **red pen**.
2. Use an answer book to grade worksheets from Levels 2A and higher in Reading, 3A and higher in Math. It is essential that your grading be accurate and consistent.
3. Draw a large circle on each side of the page that has no errors.
4. If a student answers a problem incorrectly, place a slash through the problem number. Minor errors (such as spelling, grammar, capitalization or punctuation) as well as incomplete answers should be indicated with a triangle. Do not correct the mistake for the student or indicate where, within the answer, the error is located. It is important that the student finds and corrects the mistake he/she makes on his/her own.
5. Once corrected, the slash or triangle should be circled to indicate that the correction has been checked and is now correct.
6. If a question is still incorrect after a correction attempt, a second slash or triangle should be placed beside the first to indicate to the student that it needs another attempt. It will also indicate to the Instructor reviewing the work later that the student had difficulty with that particular question.

**When should you use a triangle instead of a slash?****Math:**

1. When the student's answer is illegible or numerals are formed improperly (e.g., backwards).
2. When word problems are incomplete. For example, when the student omits the unit of measurement in Level B or does not write out the steps to the word problems.
3. When, in Level C and higher, the student forgets to bring the remainder up beside the quotient.
4. When the fractional answers are not reduced to the lowest terms.

5. When the number is not the lowest possible Least Common Multiple (LCM).

**Reading:**

1. When the student's answer is illegible.
2. When the student makes an error such as punctuation, grammar, capitalization or spelling.
3. When the student leaves part of an answer blank.

When grading assignments, you may find that an entire worksheet has been skipped. In this case, place a triangle at the top of the page. It is advisable to have the student time himself/herself while solving the incomplete page(s). Add the additional time taken to the original completion time.

**USING THE GRADING SCALE**

1. Each a-side contains a grading scale that converts the number of errors on the worksheet into a percentage range. Circle the correct percentage range that corresponds to the combined number of errors on the a-side and b-side of the worksheet. Do this for each sheet in the packet. If both sides of one sheet are correct, circle the "100" on the grading scale of the a-side of the page.
2. To use the scale for Reading, count the number of major errors made on sides a and b, and determine the percentage which would correspond to that number of errors. Then count the minor errors and subtract 5% for each from the percentage for the major errors. For example, if a student makes only major errors on a page, the corresponding amount of errors would be circled on the grading scale on side a. If a student makes only minor errors on a page, 5% per error would be deducted from 100% and the corresponding % would be circled on side a. However, if a student makes both major and minor errors on a page, the major errors would be subtracted first, then 5% for each minor error would then be subtracted. If the result would end in a 5 (e.g., 85%), then truncate (e.g., 85% truncates to 80%).
3. In Math, Levels 7A, 6A and 5A are always graded 100%. The grading scale for the Reading program begins at 3A141. Therefore Reading levels 7A-3A140 are always graded 100%. This way, the beginning student learns to feel successful in the program from the start. The parent and Instructor work with the student until correct answers are given on these problems as you work through them. There are no tests at the end of these levels.

Summarize the grades for each sheet on top of the first page, as well as the number of minutes used. Please circle the number of minutes used, rounding to the nearest whole minute. If the entire set is correct, write "100" in large print at the top of the page. The code we use is as follows: a dash stands for a sheet with 100%, 9 stands for 90%, 8 stands for 80%, 7 stands for 70%, and 6 stands for 60%. For example, a code of 87-96 at the top of a five page set indicates grades of 80% on the first page, 70% on the second page, 100% on the third page, 90% on the fourth page, and 69% on the fifth page.

**Grading miscellany:**

1. Students should be encouraged to work neatly, but sloppy answers should not be marked wrong unless they are illegible.
2. After checking the student's answers and finding mistakes, make sure that the student is reading the instructions as well as the examples.

**Working with children at the Jr. Kumon levels (7A-2A in Reading; 6A-4A in Math):**

Most of this work must be done by the student in the presence of an adult. For Reading students, the parent must gently correct any errors made in pronunciation of words as soon as the child makes the error. This will have the greatest impact on how quickly the student builds vocabulary and reading skills. For Math students, parents must verify that numbers are being read, and that objects are counted correctly. Encourage students to count objects quickly in rows of 5 (as the dots are presented throughout these levels) or groups of 10 (e.g. rings of beads in 4A). All these help students recognize patterns and develop their number sense, insuring success in later levels.
